Announcement of a post-dostoral position opening at IPHC: postponed deadline

A two years post-doctoral position will be opened early November 2018 at IPHC-Strasbourg, France. It is funded by CNRS-IN2P3 and aims at the data analysis of AGATA-VAMOS (GANIL) and BEDO-TETRA (ALTO-Orsay) experiments in the neutron-rich Ge and As isotopes. The successful candidate will also contribute to the setting up and running of the array at GANIL during the physics campaigns.

Applicants are required to have a PhD degree in experimental nuclear physics and are expected to have a strong motivation for both data analysis and instrumentation. The deadline of application is extended to June 1.
